## RESORT COMPLEXES AS A DIFFERENTIATED CATEGORY IN THE THEORY OF TOURISM

PhD student **Dimitar Stoynov**

### Abstracts

The emergence of resort complexes in response to the growing demand for organized recreation on a global scale, introduces into tourist relations altogether new systemic states of high importance to tourist development in a number of aspects. On the other hand, according to the author, the science of tourism does not study in a differential manner the processes and phenomena occurring in them. That is why the present article is an attempt at outlining the main characteristics of the phenomenon "resort complex" by defining the concept and conducting a brief systematic and typological analysis of its manifestations, with a view to a further in-depth study and inclusion into the theory of tourism.

**Keywords:** *resort complex, definition, typology, systems analysis, structure, functionality, differentiated category.*
